Work Experiences

Machine Learning Engineer, [MobileDrive](#), New Taipei, TW | Jun. 2023 ~ Now
Python/C++/Git/Docker/ROS/PyTorch

- Developed a method for projecting future vehicle trajectories on current front-view images as ground-truth for **3D Vehicle Future Trajectory Model**. This approach utilizes data collected by vehicles equipped with RTK and front-view cameras, enabling model training **with minimal human intervention**.
- Developed and optimized **3D Vehicle Future Trajectory Model**, enhancing performance through empirical experiments focused on **dataset improvement, warping method, and data augmentation**.
- Deployed the quantized model on the **Qualcomm 8295 platform** by converting the Python program to C++. Optimized **model efficiency** achieved **200 FPS**, and **the quantization error (L1 error)** was **reduced from 4.0 to 0.15 (266% ⬇)**.
- Collaborated with team members to integrate the quantized model into the **AR navigation algorithm**, enabling **on-vehicle testing**. This enhancement significantly improved performance in challenging scenarios, such as navigating **roundabouts and executing sharp turns**.
- Developed **intersection depth estimation auto-labeling algorithm** using projected RTK trajectory
